iL Verify Apps – Account for things outside of Accounting

iL Verify uses Smartphone and RFID technology to do:

- **Inventory Tracking** – Assign Equipment, maintenance and movement so you always know where your assets are.
- **Delivery Tracking** – GPS history and data of every delivery with an Uber like feel for you and your customer.
- **Service Orders** – Customer or Employee generated service requests with real time progress updates and complete history
- **Time Clock Tracking** – Get GPS accuracy on all employee time for payroll and jobs for tax filing purposes. Eliminate the headache of guessing how much time an employee spent in each municipality.

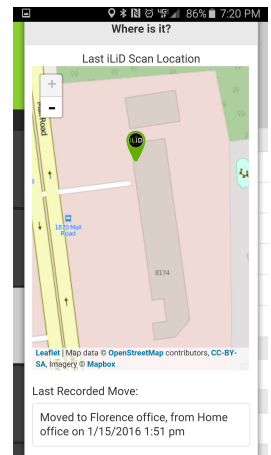

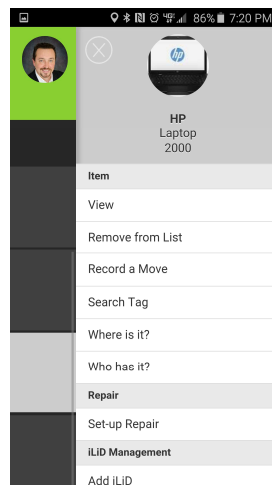

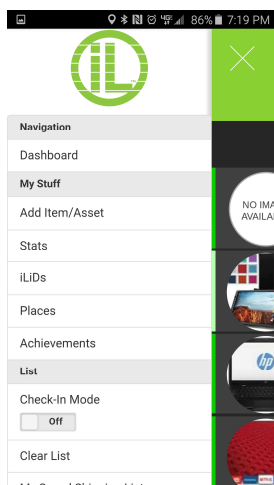

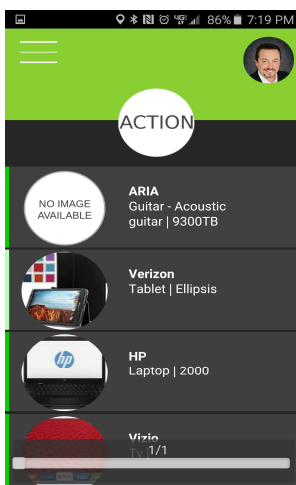

This system accounts for things outside your accounting software. Verify where things are and that work is getting done.

All modules are in 1 easy to setup App on your device and designed for multiple users in a company to share information in real time from your phone, tablet or desktop.

SPECIAL OFFER FOR THE NEXT 100 COMPANIES TO USE iL VERIFY

The first 100 businesses to contact us at 888-959-6876 x 102 will be grandfathered in at a special price and included in our advisory group for future features.

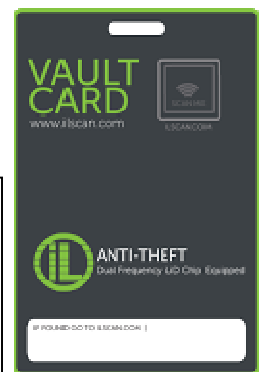

iL Verify Apps in Action – Runs and looks the same from phone, tablet and desktop for team use.
